Even numbers unlucky; Halves disregarded.

The old Hindu merchants, used to multiply as follows:

53 × 25
 53 × 50
 13 × 100
 5 × 200
 3 × 400
 1 × 800

1325

In the right hand column they doubled the factors; in the lefthand column they divided them by two.

But since they did not know much about figures, the halves were left out, like in the example: 53 divided by 2 is 26½ (the ½ was left out and they proceeded by dividing 26 by 2) The same happens in the above example when 13 divided by 2 produces 6 instead of 6½.

This dividing by 2 they kept on until the lefthand column came to 1.....

Then, because they believed that the even numbers are unlucky, they scratched out all even numbers in the lefthand column and the corresponding number in the righthand column.

The remaining numbers in the righthand column were then added and..... presto, the correct answer to the multiplication appeared.

Unbelievable? Try it. Take any two numbers at all, follow the above indications and check the answer. IT IS ALWAYS CORRECT.

The strangest part of this procedure is that it is not based on any mathematical rule at all but on superstition (the unlucky even numbers) and ignorance (the cancelled ½).

FREE Service Information:

Do you want free information on the daily routine of automobile maintainance such as:

Tire and Battery service.

Lubrication,

Engine upkeep etc.?

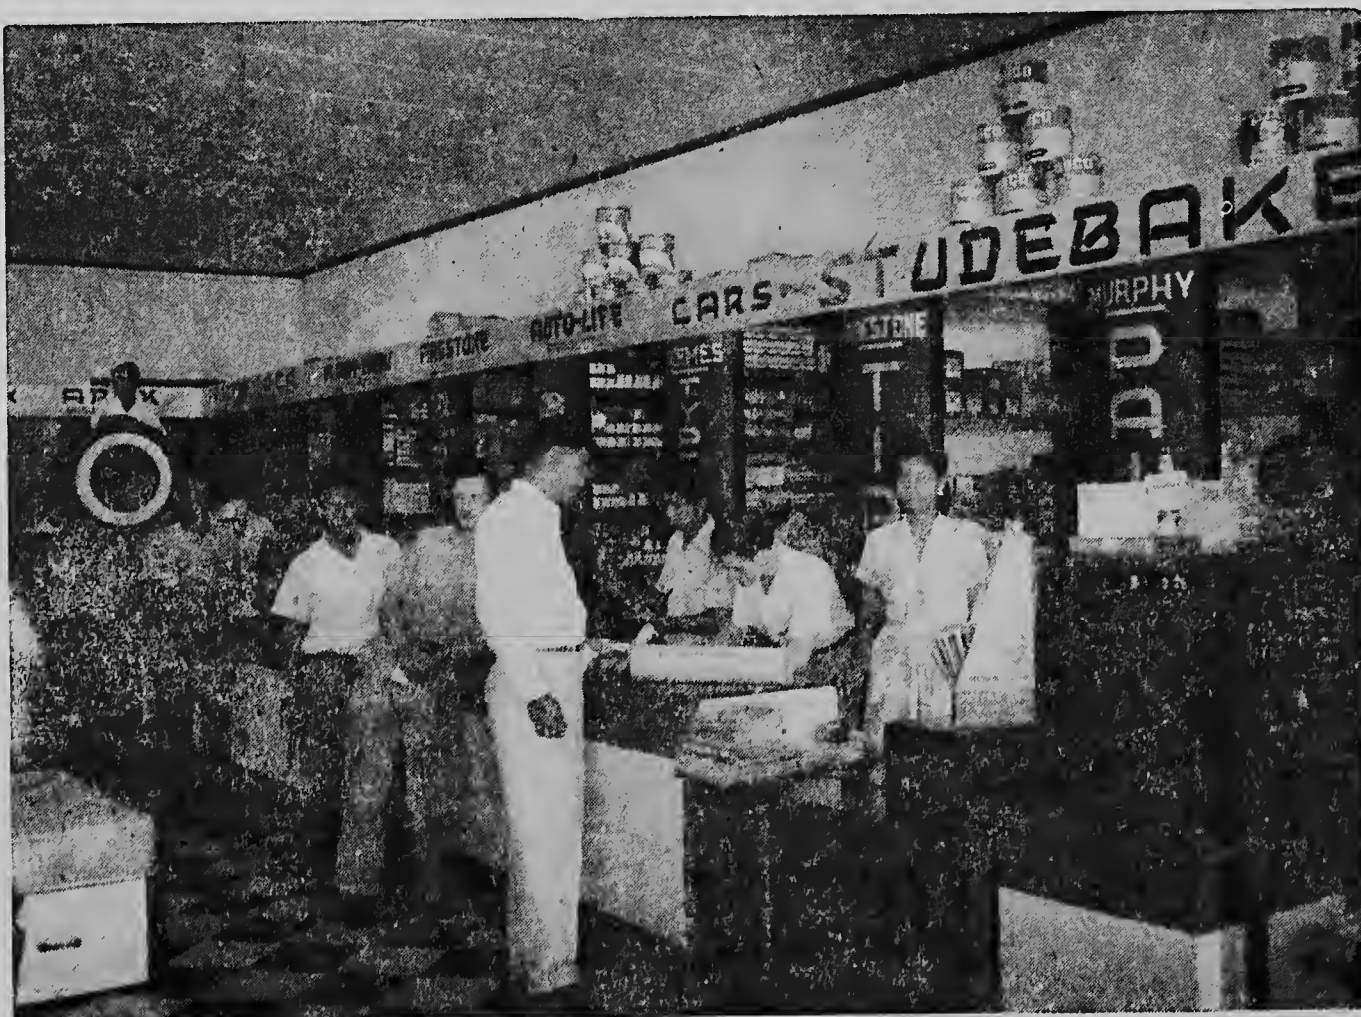

Cut out this coupon. fill in your name and address and mail it to NEME'S,

P.O. Box 11, Oranjestad.
